

I wish electrical work was as easy as tying together all the black, white and green wires. Truth is electrical work is truly sophisticated and more complex than it seems. It is understood if the lights turn on, the outlets have power, that my electrical system is fine and that I have no issues.

Unlike other trades, plumbing as an example, you know if you have a problem as a pipe might be leaking or a toilet may be running. However, with electrical problems some of the problems you will not be able to see.

This is why hiring an electrical contractor should be taken with great caution. The side effects of hiring an electrical contractor who sends his 'workforce' to your home are the reasons why we do what we do.

Repairing wiring issues, updating grounding issues, fixing panel issues and all these issues is how EMF is created, which is inherently due to unqualified electricians that do not comprehend the full extent of the National Electrical Code.

Now the EMF needs to be assessed, identified, sourced out and generated into an action plan. My [2] key journeyman electricians and I are the 'workforce', we have the in-depth knowledge of the National Electrical Code, along with other critical publications.

We take this work very seriously.

We look forward to giving you the service you require and delivering the health and safety you deserve.

Sincerely,

Anthony Foronjy  
Master Electrician
